

## PVIA-2TE series

### 2.4 – 5.3 $\mu\text{m}$ InAs and InAsSb two-stage thermoelectrically cooled, optically immersed photovoltaic detectors

**PVIA-2TE series** features two-stage thermoelectrically cooled IR photovoltaic detectors based on  $\text{InAs}_{1-x}\text{Sb}_x$  alloys, optically immersed in order to improve performance of the devices. They do not contain mercury or cadmium and are complying with the RoHS Directive.  $3^\circ$  wedged sapphire ( $\text{wAl}_2\text{O}_3$ ) window prevents unwanted interference effects.

#### Spectral response ( $T_a = 20^\circ\text{C}$ , $V_b = 0\text{ mV}$ )

Exemplary spectral detectivity, the spectral response of delivered devices may differ.
